Description

The McConnel Mulch Head is a rugged, professional-grade mulching attachment designed to integrate seamlessly with Robocut remote-controlled mowers and power units. Engineered for heavy-duty vegetation management, it shreds grass, brush, and light woody material into fine mulch for clean results and efficient ground coverage.

Built for durability and versatility, the Mulch Head features a precision rotor design, aggressive cutting tools, and adjustable safety guarding. It’s ideal for maintaining road verges, embankments, utility corridors, and overgrown parcels of land.

Key Features:

Efficient mulching performance for grass, small shrubs, and light woody material

Heavy-duty rotor design with high tip speed for better cutting action

Aggressive cutting tools optimized for fine mulching and minimal clogging

Adjustable front hood or guard to manage material intake and improve safety

Rear support / roller system for consistent cut height and smooth finish

Skids or side supports to protect the machine and control ground clearance

Seamless compatibility with Robocut / remote mower hydraulic systems

Robust construction for longevity in commercial and rugged environments

Applications:

Highway verge cleanliness and maintenance

Riverbanks, embankments, and steep slope mulching

Utility and pipeline corridor clearance

Municipal green space and roadside vegetation control

Reclaiming overgrown land for maintenance or aesthetic purposes

McConnel’s Mulch Head delivers powerful, precise mulching capability — giving operators a clean finish, better control of biomass, and safer remote operation across challenging terrain.
