## Description

The McConnel Robocut T600 is the most powerful model in the Robocut range — designed for heavy-duty performance in the harshest conditions. Built with a robust 60hp Stage V engine, enhanced hydraulic capability, and an advanced track platform, the T600 delivers superior cutting force and control on slopes up to 55°.

With its remote-controlled operation (up to 150m range), the T600 keeps operators safe while tackling demanding vegetation management tasks in areas that are too dangerous or inaccessible for conventional machinery. Whether it's forestry clearance, highway maintenance, or utilities work, the Robocut T600 is engineered to perform.

### Key Features:

60hp Stage V-compliant diesel engine for increased power and efficiency

Remote control range up to 150m with responsive, intuitive handling

High-capacity hydraulics for demanding attachments

Low ground pressure for reduced soil impact and excellent traction

Designed for steep slopes and extreme terrain (up to 55° incline)

Compatible with a wide range of heavy-duty front-mounted attachments

Rugged build quality for continuous operation in commercial environments

The Robocut T600 sets the standard for remote-controlled mowing in tough, hazardous environments. With more power, more capability, and the same industry-leading safety and control, it's the machine of choice for professionals who demand the best.
