## Description

The McConnel 1.3m Grass Head is a heavy-duty flail attachment designed for use with Robocut remote-controlled mowers. Built for cutting grass, light scrub, and overgrown vegetation, it delivers exceptional performance and durability in even the most challenging terrain.
Engineered for productivity and safety, the 1.3m Grass Head features a robust spiral rotor, hydraulic front hood, and full-width rear roller, ensuring a clean, consistent cut and excellent ground-following capability. Whether you're managing highways, embankments, or rough terrain, this flail head is built to perform.

Key Features:

1.3m cutting width for efficient ground coverage

Spiral flail rotor for smooth operation and high material throughput

Hydraulic front hood for controlled intake and improved safety

Full-width rear roller for consistent cutting height and finish

Adjustable side skids to protect against scalping and maintain ground clearance

Compatible with Y-flails or hammer flails to suit grass cutting or light scrub clearance

Built for Robocut machines – perfect integration with T500, T600, and other models

Durable construction for long service life in commercial environments

Applications:

Highway verge mowing

Rail and utility corridor maintenance

Embankment and steep slope vegetation control

Local authority and contractor ground care

Light forestry and scrub clearance

The McConnel 1.3m Grass Head offers the ideal balance of cutting power, flexibility, and safety — making it a top choice for professional operators using remote-controlled slope mowers.
